

## Overview of Climate Change in the Columbia Basin

The Canadian Columbia Basin is already experiencing hotter, drier summers, warmer, wetter winters, and more extreme weather, and climate scientists are projecting these trends to continue into the future. <sup>[1]</sup> Average annual temperatures in the Basin have increased by 1.6°C over the last century, and the rate of warming has increased to 3.1°C per century over the last 5 decades. Annual average precipitation has increased by about 20% since the early 1900s, though the rates vary by location and season. Looking ahead to the 2050s, current global climate models are projecting average annual temperatures to be 2.7°C to 3.6°C warmer compared to the recent past (1951 to 1980). Winter and summer precipitation are expected to change by as much as +19% and -24% respectively. Without substantial global reductions in greenhouse gas emissions, Basin residents can expect, depending on their location, up to 42 more days per year with maximum daytime temperatures over 25°C. In addition, the maximum precipitation falling on one day in any given year is projected to increase between 6% and 35%.

## Community Data <sup>[2]</sup>

Variable	Period	Recent Past (1951-1980)	Near Future (2021-2050)		Far Future (2051-2080)	
			Low Carbon <sup>ii</sup>	High Carbon <sup>iii</sup>	Low Carbon	High Carbon
<b>Mean daily temperature (°C)</b>	Annual	6.1	8.0	8.4	9.1	10.2
	Spring	5.6	7.5	7.9	8.7	9.3
	Summer	16.2	18.4	18.8	19.6	21.3
	Fall	6.1	7.8	8.0	8.8	9.8
	Winter	-3.6	-1.7	-1.5	-0.9	0.1
<b>Total precipitation (mm)</b>	Annual	902	938	935	936	958
	Spring	222	247	246	265	263
	Summer	187	160	163	151	146
	Fall	218	230	223	237	245
	Winter	278	285	274	283	297
<b>Days with max temp &gt;25C (days)</b>	Annual	42.0	63.5	66.5	75.5	88.3
<b>Max 1-day precipitation (mm)</b>	Annual	27	32	31	32	34
<b>Longest dry spell (days)</b>	Annual	17.8	19.5	18.5	20.5	21.5
<b>Growing season length (days)</b>	Annual	193.8	213.3	216.5	226.5	236.8

Modeled mean annual temperature for Salmo from 1950 to 2099

Modeled mean annual temperature for Basin-Boundary region; recent past (1951-1980) vs. far future (2051-2080); high carbon future scenario.

## Key Climate Impacts and Opportunities for Action

### Housing, Buildings and Infrastructure

Wildfires, flooding, extreme storms, and water shortages all represent threats to the safety and well-being of our communities. These threats are anticipated to become more pronounced with climate change, which will either physically endanger our homes and buildings, or challenge our infrastructure's ability to serve community needs. Take action:

- Protect your property from wildfire: <https://bit.ly/2M5rZAn>
- Conserve water at your home or business: <https://bit.ly/3qBwfa3>
- Improve your level of emergency preparedness: <https://bit.ly/2ZsuKyl>

### Economies

Changing weather patterns present risks *and* opportunities for Basin businesses and the economy. Most vulnerable are enterprises that cannot adapt successfully to new climate and environmental conditions or transition to a low carbon economy. However, businesses and sectors that can capitalize on the new climate or support a transition away from fossil fuels are well positioned to succeed.

- Adapt to climate change on your farm: <https://bit.ly/3k6hOZO>

### Nature

As temperature and precipitation patterns shift and change, ecosystems in the Basin can be expected to change, too. This includes more natural disturbances such as wildfire and pests, changes to the water cycle and water availability, and the emergence of new compositions of plant and animal species.

- Prevent the spread of invasive species: <https://bit.ly/2ZxfuAO>

- Become a citizen scientist and help monitor ecosystem change: <https://bit.ly/2wpJ3oZ>

### Quality of Life

Climate change presents a risk to our health and lifestyles. Our physical and mental health will be increasingly challenged by rising temperatures (and related impacts, such as more frequent wildfires and the spread of vector-borne infectious diseases) and extreme weather events. Vulnerable individuals - the elderly, young children, those with chronic conditions - are at greater risk. Some cultural, recreation, and lifestyle practices may have to be adapted to new climate and environmental conditions.

## Local Action Stories

### The River Speaks: Learn, Create, Share and Grow

The Salmo Streamkeepers hosted a project for community members to learn about the environment and watershed issues. Participants were invited to share their thoughts using poetry and photography.

### Salmo Wetland Restoration

After a climate resilience planning session, the Village of Salmo recognized flood risk as a top concern. The Village partnered with the BC Wetland Institute to reclaim a local wetland to help divert and store excess water.

### FireSmart Recognition

Salmo has been FireSmart recognized where the wildland/urban interface has been assessed for wildfire hazards and the community's readiness has been evaluated, with solutions being implemented. In 2015, Salmo received a FireSmart Community Protection Achievement Award.

<sup>i</sup> All figures are median outputs from 12 models for the given time period. Community data is based on calculations for a 10x10km grid with centerpoint: 49.194, -117.279.

<sup>ii</sup> RCP 4.5 (low carbon) scenarios assume global greenhouse gas emissions are drastically reduced from current levels

<sup>iii</sup> RCP 8.5 (high carbon) scenarios assume greenhouse gas emissions continue increasing at current rates
